

# Website Development Assignment

## Objective:

Create a fully functional website with at least **10 pages** using **HTML5** and **CSS3**. The website should be well-structured using **semantic tags** and should incorporate effective styling to ensure a professional and visually appealing design.

---

## Requirements:

### 1. Website Pages (Minimum 10):

- Home
- About
- Contact
- Services
- Portfolio
- Album
- Privacy Policy
- Return Policy
- Terms and Conditions
- Any other relevant page of your choice (e.g., Blog, FAQ, Testimonials, Team, etc.)

### 2. HTML5 Implementation:

- Use **semantic tags** such as `<header>`, `<nav>`, `<section>`, `<article>`, `<aside>`, `<footer>`, etc.
- Utilize the most common HTML elements, including `<h1>-<h6>`, `<p>`, `<ul>`, `<ol>`, `<table>`, `<form>`, `<button>`, `<img>`, `<a>`, `<div>`, etc.
- Ensure **proper structuring** of content using headings, paragraphs, and lists.

### 3. CSS3 Styling:

- Implement an **organized and well-structured** CSS file.
- Use **CSS Grid or Flexbox** for layout structuring.
- Apply **color schemes, typography, and spacing** for an aesthetically pleasing design.
- Use **hover effects, transitions, or animations** where appropriate.
- Implement a **responsive design** to ensure the website adapts to different screen sizes.

### 4. Navigation:

- Create a **main menu** that links to each page in the website.
- The menu should be present on all pages for easy navigation.
- Use a **consistent layout** for the navigation bar.

### 5. Other Features:

- Include at least **one form** (e.g., Contact Form with Name, Email, Message, and Submit Button).
- Use **internal linking** between pages where necessary.
- Include at least **one multimedia element** (image, video, or audio).

---

## Submission Guidelines:

- Submit a **zipped folder** containing all HTML, CSS, and media files.
- The main HTML file should be named **index.html**.

- Ensure that all pages are linked correctly and the website functions properly.
- 

### **Evaluation Criteria:**

- **HTML Structure & Semantics (20%)** – Proper use of HTML5 semantic elements.
- **CSS Styling & Design (30%)** – Effective use of CSS3 for a professional look.
- **Navigation & Usability (20%)** – Well-structured menu and easy navigation.
- **Content & Functionality (20%)** – Relevant content and working elements (forms, links, media).
- **Responsiveness & Organization (10%)** – Mobile-friendly design and organized code structure.
